Comprehensive Neighborhood Iguana Removal Programs

IGGYTRAP™
Florida's Iguana Solution

STEPS ON HOW TO BUILD A SUCCESSFUL IGUANA REMOVAL PROGRAM BY INVOLVING THE ENTIRE NEIGHBORHOOD

IggyTrap™ specializes in building complete neighborhood iguana removal programs. The best way to make significant in roads into the iguana infestation involves organizing residents, coordinating efforts, and implementing effective strategies to reduce the iguana population and mitigate future infestations. Here's a step-by-step guide: IggyTrap™ is your trusted source in developing an effective iguana remediation program and can provide all education materials, site surveys and target areas, all instructions, as well as full removal services. Below are our recommended steps in beginning to organize a neighborhood Iguana removal program:

1 Organize and Educate the Community

Form a Committee: Create a group of interested neighbors to lead the program. Assign roles like coordinator, communication liaison, and field team leaders.

Host Informational Meetings: Educate residents on the issues caused by iguanas, such as property damage, health concerns, and their impact on native wildlife. Discuss legal methods for iguana control in your area. IggyTrap™ is available to organize presentations, provide a host of educational materials, strategies and methods for the best program.

Distribute Educational Materials: Provide flyers, newsletters, or online resources with information about iguanas, including identification, habits, and legal removal methods.

STEPS ON HOW TO BUIL

2 Develop a Neighborhood Action Plan

Set Clear Goals: Establish specific goals, such as reducing iguana sightings by a certain percentage or removing a set number of iguanas each month.

Map Problem Areas: Identify hotspots where iguanas are most prevalent. Focus efforts on these areas first.

Create a Timeline: Plan activities like trapping sessions, habitat modifications, and educational campaigns over a set period, such as 6 to 12 months.

3 Implement Habitat Modification

Remove Attractants: Encourage residents to remove iguana food sources like fallen fruit, open trash, and pet food. Replace iguana-attractive plants with those they dislike, such as citrus and oleander.

Modify Landscaping: Trim trees and shrubs to reduce hiding spots, remove debris piles, and consider installing fencing or barriers to prevent iguanas from accessing certain areas.

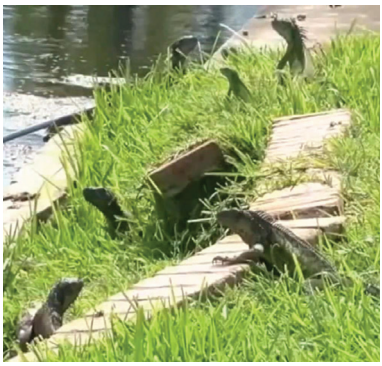
Community Cleanup Days: Organize neighborhood cleanups to remove debris, clear overgrown vegetation, and prune trees and bushes that iguanas use as shelter.

4 Coordinate Trapping and Removal

Set Up Community Traps: IggyTrap™ can provide the most efficient and humane traps for rental or purchase and distribute the traps to residents for common areas. Educate participants on how to safely bait and monitor traps. IggyTrap™ also offers a variety of trapping accessories.

Humane Removal: Establish a plan for humane euthanasia of captured iguanas. IggyTrap™ can provide several different removal services if necessary.

Record-Keeping: Keep records of how many iguanas are trapped and removed. This helps track progress and adjust strategies. IggyTrap™, provides detailed, daily trapping reports, by each trap, along with a weekly summary report.



EMOVAL PROGRAM

5 Hire Professional Help

Engage Licensed Trappers: IggyTrap™ is fully a fully FWC license professional trappers, especially for larger infestations. IggyTrap™ can handle difficult cases, ensure humane removal, euthanasia, disposal and provide additional advice. IggyTrap™ can develop a specific/custom iguana removal program that aligns with the neighborhood's objectives and budget.

Check Insurance: It is important to check for Insurance coverage and even request a COI (Certificate of Insurance) along with Workers Compensation Insurance. They need to have adequate coverage and not just the bare minimum.

6 Implement Deterrents and Barriers

Use Repellents: Apply commercial iguana repellents around the neighborhood, especially in common areas like parks and gardens.

Install Fencing and Tree Guards: Organize a community project to install fencing, tree wraps, and other barriers in high-traffic areas. IggyWrap™ for trees and IggySkirt™ for Lamai are prefect solutions to prevent iguanas from accessing these areas.

7 Legal and Ethical Compliance

Know the Laws: Ensure that all actions comply with state and local regulations. In Florida, it is legal to humanely euthanize iguanas on private property but releasing them is prohibited.

Humane Practices: Emphasize the importance of humane treatment of iguanas in all aspects of the program.

8 Ongoing Monitoring and Maintenance

Regular Inspections: Monitor the neighborhood for signs of iguana activity, especially during breeding season.

Adjust Strategies as Needed: Use data from trapping and sightings to refine the program. If a particular strategy isn't effective, be flexible and try new methods.

9 Communication and Community Engagement

Stay Connected: Use a dedicated social media group, email list, or messaging app to keep residents informed and engaged.

Celebrate Successes: Share progress reports, celebrate milestones, and recognize volunteers to keep the community motivated.

Call today and let's get started solving your iguana issues!

By organizing and implementing these strategies, with the help of IggyTrap™ you can create a comprehensive and effective neighborhood iguana removal program that reduces the iguana population and minimizes their impact on your community.
